

- **Yardi System Updates**

- iAffordable Portal
 - The iAffordable Portal has a go-live scheduled for mid-July.
- Yardi Background Screening
 - The Agency is working with the Project Management team for background screening. This service utilizes Yardi Inc. for background checks which will increase the speed at which the Agency processes this information required for applicant admissions. This is for both HCV and Agency owned properties.

- **VPN Security**

- Upgrades were performed to the VPN service in the month of June to further protect against data breaches as this is the only open source to the Agency's network.

- **Email Filtration Updates**

- Updates were performed in late June to provide additional inspection of email messages for compromised content. The system continues with a daily quarantine delivery for users with quarantined messages.

- **ERAP Data Extraction**

- The Agency worked with Neighborly software to extract all ERAP data. The data dump has been backed up for redundancy and will be stored by the Agency for any future audits and/or reference.
