**I.T. Equipment –** The Agency has purchased additional equipment to support future hires. This includes workstations, peripherals, and mobile devices. As new hires are made, additional equipment will be ordered if necessary to provide timely spare devices and plan for any vacant positions not yet filled.  All workstations are configured with a 3-year, next business day hardware warranty from the manufacturer.

**Yardi Property Migrations** – The Agency is meeting with project leads at Yardi in the month of January to discuss project timelines and complete configuration of the test environment for Property Migrations.  Once the environment is stable, staff will test out functionality to determine if any solutions are necessary to move forward with migrations.  Trainings for staff will take place prior to and post migrations in order to transition as seamlessly and quickly as possible, positioning the database for Rent Café Compliance.

**The 1612** – Once all low voltage and electricity is complete, I.T. will install the network and verify all connectivity both wired and wireless at the site.  I.T. is also preparing peripheral equipment ahead of the opening.

**Inspection Templates** – The Agency is currently working to enhance the unit turn-over and move-in process regarding mobile Inspections.  The goal is to create a more efficient process once a unit turn has been completed and the move-in inspection takes place utilizing the tablets that both maintenance and property management staff have assigned.

**Camera Systems** – The Agency has installed and configured additional camera systems at multiple sites in the past months.  These systems are smaller, self-contained, and utilize hosted remote storage with over 6 months of retention.  This footprint allows for more systems to be installed at various sites and the Agency is going to continue setting these up as needed in the coming weeks and months.
