1612 Network – Information Technology (IT) staff will be installing the entire production network environment at The 1612 site in the month of April, leveraging fully up to date security settings to ensure the highest level of protection for the Agency. In addition, the camera system that will be used throughout the 1st phase of the building is scheduled for installation and configuration once the network is up. IT staff will also work to prepare desks and workstations for returning staff.

Yardi Projects – Updates - The Agency continues to work with the Public Housing Authority team at Yardi to improve processes within the software and efficiencies for Housing Authority Staff. The list of projects includes streamlining property portfolios, construction development and budget tracking, payable processing, and resident notice workflows.

Yardi Software Update – There are several HUD requirements for the Yardi software platform scheduled in 2023. The first round of changes is a systemwide update for the Public Housing Authority Module. While the Agency aims to perform the upgrades necessary, staff has an approved request to roll out updates after other databases have shown stability within the new version. The Agency's updates will take place at the end of April or early in May.
