

**1612 Apartments Update** – IT staff trained Buckingham PM staff in order to handoff operational management of the new camera system.

**Arturo Ochoa Migrant Center – Update:** an additional site visit took place before the center was fully opened in April to configure new workstations & local phone/voice presence for staff. In addition, the network was brought fully online for the main building offices and peripheral equipment.

**LEAN Firm Reporting & Analytics** – IT Staff is working with Mark and Adi at the Lean Firm to update reports and data extraction from the Authority's Yardi database. The developer (Adi) has been building a Microsoft PowerBI dashboard to present various data queries in very clear, concise outputs for our different programs and properties.

**Email Phishing Protection Suite** – Authority Staff worked to configure and deploy a new advanced threat protection suite for increased defense against phishing (impersonation) attacks, as well as further account security measures for the email system. In addition, IT made advanced changes to the fundamental way that the domain stanregionalha.org is configured in internet DNS to future proof for security measures across email internet protocols. These changes help to keep the stanregionalha.org domain itself from being spoofed to outside organizations.
